Tech courses that make up our modern workplace

Free, Online Ex·plore Courses

Delve into topics like Cybersecurity, Linux, IoT and Python. Learn something new and venture away from the ordinary and move toward new career possibilities.
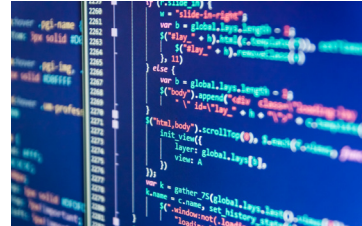

Intro to Cybersecurity

Have a knack for solving puzzles? Then consider this course because few areas offer more chances to solve problems than the field of cybersecurity.
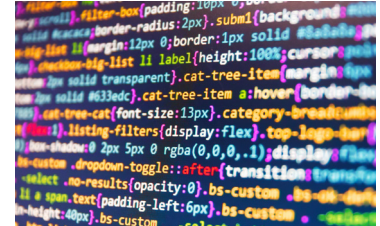

Intro to IoT

If you learn IoT, you can innovate like a technologist. No kidding. This course focuses on Internet-connected "smart" devices that are revolutionizing the world.

Linux Unhatched

Like wading into the shallow end of a swimming pool, this course will give you a great understanding of the most-used, open source operating system.

Programming Essentials in Python

Worldwide Python is a major force in web applications, big data analytics and machine intelligence. All due to its intuitive, readable rules making it beginner-friendly.

Add tech skills to your resume

Whether you're searching for your passion or wanting to embark on a hybrid career, Networking Academy offers courses that cater to different experiences. Our goal is simple: to empower all people with career possibilities. Let us be the bridge to what's possible for you.
